Buying the right equipment for your off-road adventure by Angelique Daniel

Article published on February 7th 2012 | Business

There are a multitude of activities that people take up for fun. Surfing, skiing, horse riding, sailing, motocross, biking and many more are all outdoor activities which require a certain level of bodily fitness and health. The important aspect is that they take place out in the fresh air.

Well one activity that requires one to be outside is driving off road. Exhilarating and challenging testing and one is never sure what the land has in store as a following challenge. One minute one can be driving over a good grave load and the next one finds oneself axle deep in clay, Once out of that one finds a river to ford and then a steep sandy bank to climb, then all of a sudden there is a ravine to cross and then another bit of fairly easy terrain... but just as one is starting to relax as this is a piece of cake then one is confronted with a mountain pass which is slippery, stony and requires careful navigation.

Such challenges are not for the faint hearted not the unfit. One may have to let down the air in ones tires for the mud and clay and sand, but pump them up again when comes to a hard surface. Getting punctures is not uncommon nor is having to dig oneself out of trouble. On occasion one might find oneself unwinding the winch to be able to pull the jeep out of a swamp. Cutting down trees in ones route or to provide a firm surface to drive on is quite usual.

But not only must the driver and crew be tough, so must the vehicle and the equipment that ensures that the vehicle comes out fairly unscathed at the desire destination. When one comes to buying accessory equipment for trucks and four wheel drive vehicles which take on such challenges one brand name stands out and that is Smittybilt.

For 55 years building specialized equipment for 4Wds, trucks and SUV s the accessories are stocked by dealers all over the US and overseas.

For example that winch needed to pull oneself out of the mud, or help someone else in trouble. What could be better than a Smittybilt xrc 10 hd firmly bolted on to the front of your vehicle. Specially designed with a 5.5hp with a 2 stage planetary gear system capable of pulling 10,000 lb (5 tons) and build with a fair lead and using top rate materials for robustness.

Or again what about your seats. Very often the factory equipped seats are not designed for the best comfort or support while riding over rough terrain. Fitting Smittybilt XRC seat are specially designed to provide maximum support while also providing comfort and luxury which is unheard of in a normal off road vehicle which the suppliers thing should mean that the seat should be hard and un-giving.

Smittybilt as a brand name is a sign of confidence, reliability and quality which is no less than one should have while exploring the great outdoors off road.
