Characteristics and Features to Consider when Buying a Dust Extractor Vacuum by [Santanu Das](#)

Article published on December 22nd 2011 | [Business](#)

Your workplace needs to be cleaned of the dust and dirt that is piling up with the passing of each day? Then you are in need of a good dust and fume extractor that will not only make your work space look tidy and clean but also make the task stress free and less demanding. There are many organizations too that has the latest dust extractors and fume extraction equipments to help your office keep fresh and clean. You can depend on a reputed dust extraction company to have the job done rightly in exchange of a specific charge. But if you want to do the task by yourself, then it is important that you choose the equipment rightly to get rid of air filings and dusts. Here in this article we will be discussing about the things to consider when buying a dust extraction vacuum to keep your surrounding clean and spotless.

The first thing to consider before buying a vacuum extractor is the question: Why do we need a vacuum for dust extraction purpose? It is observed that there are specially designed vacuum cleaners available in the markets that are used exclusively for dust removal purpose. There can be no doubt that a clean and dust free environment results in better productivity, thus making it mandatory in all working organizations to ensure hygienic surrounding. Another important factor that should prompt all to keep work environment clean is that too much of piling of dust and dirt can lead to sudden mishaps such as fire in machinery and other equipments. Also working in dirt and dust can make you fall sick with various lungs problems.

How to choose the best dust extraction vacuum for you: The first and prime thing to consider when choosing dust and fume extraction machine for your office is that it should have a powerful motor so that it is capable of extracting dust and dirt from every nooks and corner with ease. Decide beforehand about the suction power of your dust extractor that you want to buy so that it can clean the whole space neatly and effectively without much stress and manual pressure.

Another essential factor to consider is that your dust extractor should not be heavy weight. With modern equipments available in various light weight base, make sure that your vacuum is also not weighty; instead it should be portable and easily replaceable so that you can carry it to any part with ease and success.

Some specific features that your fume extractor should have: Here we bring for you some common and essential features that your vacuum should have to help you have a complete dust extraction solution. It should be designed with the capability of getting connected to all types of power tools. Moreover, there should be a twist lock that maintains the connection securely to the tank. Check repeatedly whether the hose is connected strongly to avoid any future mishaps.

Also check the filter system of the fume extractor to ensure that it provides with clean air and reduced dust quotient. Test rightly if the filter fibers in the vacuum are capable of extracting the smallest of particles to give a comprehensive solution.
