Article published on August 21st 2012 | Business

Have you ever tried to think as to how these glossy colorful and attractive pages ended up in your magazine and everything got printed? With printing requirements on a rise, more and more publishers, magazines and newspapers are opting for the great method of printing, Offset printing. Be it the CD inserts or brochures, books or folding cartons this printing technique is being used widely because of its efficiency and quality. Let us now understand how this printing technology, which is taking over most cheap printing techniques, works.

Offset printing has become popular as it is quick, can be produced easily and is economical at the same time. Also, the print quality after the use of this technology is very high and uniform and the images produced are of a high resolution and sharper and cleaner than other cheap printing techniques. All these factors have lead to a high preference for this reliable method of printing. The main process of printing involves carrying over the inked image to the rubber blanket from a plate. The image is then carried to the printing surface completing the process. Sheet fed litho and web fed litho are the two kinds of paper usually used in this technology of printing.

There are a various number of printing labs and companies that are now specializing in offset printing solutions and providing their services in affordable packages in commercial ventures. They provide color as well as digital offset printing solutions and the staff and workers are highly knowledgeable about the techniques and processes which are implemented in this printing technology and are dedicated in producing large quantities of printed material in less time. This printing technology is the most widely used and with its advantages, it is not going to lose its shine in the years to come.
