Colder Products- a Solution for Quick Disconnect Coupling by Julia Roger

Article published on March 19th 2012 | Business

Whip Check cables are widely used these days for air hoses to prevent the exterior ends from whipping. The coupling flows out of the hose if it is not cared properly. They are presented in a wide range of different styles which includes ferrules in the standard hose type at the end part. whipcheck cables are basically used for preventing accidents where hose lines separate at a particular place. These cables are well known for meeting with any type of emergency that can happen at the time of transmission of liquid materials from hose pipes. These cases may happen when compressed air or any other high pressure operations are on the move. These hoses will simply whip under the sudden release of energy with the profitable result. In case of any serious injury or accidents they are going to help a lot.

The colder products are made from strong Galvanized steel cable that prevents hose whip with easily fitted springs. They are having spring loops and has grip that holds the hose normally. The new model and whip check ranges are same and model family has a yellow plastic tag enclosed with it. These helps a lot in providing correct fitting instructions. They are much suitable for coal mining applications and can be produced with copper ferrules. They can also be used with sea-water and petro chemicals as well. There are single-use connectors that are available for quick and easy connections and can serve the purpose well. They are also having flexible bag systems with tube assemblies and other bioprocess equipments as well. These colder products minimize the risk of contamination and are associated with modern reusable components. The colder drum system allows conversion of virtual systems into dispensing systems. They are going to minimize employees and environmental exposure with the potentially dangerous and hazardous chemicals.

They also prevent the contamination of products from sensitive fluids such as hazardous chemicals and diesel exhaust fluids. These chemicals are also very sensitive to food or consumable ingredients of daily use. They can also be used in the place of electronic cooling components.
