Color Concentrate - Fast Becoming a Major Priority for Many by Royceintl

Article published on May 25th 2012 | Business

Before going any further, let us get to know what exactly a Color concentrate is. It is a plastic compound with a soaring percentage of color and it is then blended in a right amount along with base resin, in order to have a final color. Well, in most of the cases, these color mixtures are often a late addendum, let us try to find as why it actually happens.

It has been found that every now and then various product managers, owners of the shops and engineers are mainly concentrated towards the fresh product cycle and involved in the evaluation of the whole process of the development of the product. The extent of concentration is so high that they tend to forget the influence color concentrate makes in the whole process of product through process.

Various factors like selection of the material, making different decision, sampling, marketing, and building of the tools, these are some of the important ones for the process of product making. However, in addition to this there are various other factors, which should be considered.

Taking early decisions for Color concentrate

It is very important that these blends be considered in the product making process because one never knows as when an unforeseen limitation takes place. There have been instances in the past where the makers of the product have to face discomfort seeing the color disappointment. It is always advisable to keep a check on those who are proficient enough to deliver what is promised.

Keeping in mind the shrink element and cost modeling, the selection of the material prior to the making of the tool should be done, and most of the times the color element is neglected, which should not happen. There are some colors, which are not reasonable enough in some resin systems and during the designing of the product.

Points to be followed

During the final choice of the concentration of the color, various factors like certification, selection of material, temperature, conditions for molding and exposure of environment should be considered. Here is a perfect instance where a particular type of legislation stating an exact color for the process of recognition reasons with no role of engineering. It can be said that the color blends were not given much importance prior to picking bright colors. This is a major reason for concern for all those who were a part of making of the product.
