Confined Space Training Sydney: Reduce Risk, Increase Safety

by Robert Duce

Article published on April 24th 2012 | Business

Confined spaces are working areas with limited access to entry and exit. These places mostly have poor ventilation and allow limited movements for the workers. Many companies in Sydney, Australia who hire workers for this kind of place requires each of the applicant to possess a certification or to complete a confined space training Sydney to be qualified for the job. This is a very important training that needs to be considered as workers are exposed to potential risk due to the limited size of the area while working. Some of the most common confined space includes sewers, storage tanks, manholes and pipelines. These are often used as a containment of gas or any liquid material and for storage of confined space equipment. Ships and many industrial factories are places where you will also find confined spaces.

Many companies are very strict in their workplace safety guidelines when it comes to confined spaces. They try to ensure that every worker in the area have undergone proper emergency response training to learn how to be consistent in the process of risk assessment, to learn the appropriate behavior necessary when working in a confined space and the ability to take action or plans in case of accident. There are many work safety issues that one must consider when planning to work in confined spaces. These may include the limited space or narrow passageways which may increase the risk in being trapped. The major concern in this area is that there are more chances that you will fall down at some point which would be dangerous in confined spaces that are relatively high. Another problem that you might encounter is inadequate temperature control which may exposed you and leads you to inhale dangerous substances, heat, asphyxiation and old stress.

Confined space can be made safer for a worker if the employer will makes sure that the place and the methods used in the operation meets the legal requirements so that any potential risk can be avoided. They must also make sure that the employees have completed a confined space training Sydney to be aware of the proper safety and emergency methods required in the event of accident. Confined space safety equipment must be provided to the workers which may include safety wires, ventilation systems and masks. Open confined space can pose danger not only to the workers but to the people within the vicinity as well. For this reason behavioral guidelines and signs are very important. Emergency response training is very important so that workers will have the knowledge to handle emergency situations safely. Signs will explain the nature of the work in the area. This will protect people around and will be able to take the necessary precaution beforehand.
