Decorative Architectural Fiberglass Columns and Porch Columns by Robert King

Article published on December 23rd 2011 | Business

Fiberglass Architectural Columns or Pillars are constructed to last a life span. There are a variety of plain and fluted fiberglass columns that are supported with the restricted lifetime warranty. Companies use to offer the vast range of ornamental assets including Roman Corinthian, Roman Ionic, Decorative Roman Doric, Greek Eretheum and many more. There are also tapered, non-tapered, round and composite Square Columns crafted in strong lightweight fiberglass, a composite fiberglass, or PVC, and also with architectural wood columns including traditional to modern styles. Various Architectural Wood Columns coming from different species of wood are also available in the market. The most regular wood columns are Hard Maple, Mahogany, Red Oak, and Cherry. All of the architectural round and square wood columns and fiberglass columns can be cut to a tailored height to facilitate installation and provide you an outstanding finished product.

Fiberglass columns are the most adaptable, external columns available on the industrial marketplace nowadays and are rapidly finding their path into some of the premium homes built. These fiberglass columns put a stunning and enduring architectural detail to any home or project. The capability to produce fiberglass columns in a range of elegances allows these columns to match and combine with many architectural designs. Fiberglass columns are the booming alternative of discerning homeowners, builders, architects and common contractors.

Primarily, fiberglass columns are supplied in a different type of finishes. The most accepted way is with a primer coat. Other finishes attainable are more or less endless range of colors supplied in a gel coated finish as well as replicated stone finishes.

In addition to enduring exquisiteness, a big cause to put up fiberglass columns on your next project is the savings connected with installation costs. Think of installing big columns without the requirement for lifts and cranes. Imagine the price decrease in manpower cost and equipment related with heavier, alternate architectural building resources (i.e. Concrete, wood, cast stone). Besides, fiberglass columns are resistant to dampness and insects. You must think seriously for using fiberglass columns in your home or commercial project.

There are also round smooth columns available in the market in a range of the conventional orders of architecture or modern architectural design including Doric, Corinthian, Ionic, Tuscan, or other Roman or Greek architecture styles. These products are made from fiberglass, fiberglass composite, polyurethane, synthetic stone â€˜glassfibre reinforced concrete, glassfibre reinforced gypsum (GRG), or wood. The round smooth and fluted columns have been used for reinstatement and overhaul projects, as well as in new constructions of historical style and designs.
