Dewalt Batteries- Maximum Capacity by [Nishaidhijames](#)

Article published on August 6th 2012 | [Business](#)

A new dewalt 18v battery has to be charged before use. You can easily refer to the device manual for the charging instructions. At the initial phase, the digital camcorder may require three to four charges discharged cycles before achieving the maximum capacity. The new battery requests to be completely charged and discharged before it can be conditioned to the full capacity. The rechargeable batteries undergo self-discharging when they are left unused. You need to store a power tool battery pack in a fully charged state for the storage purposes.

Whenever you are charging the device for the first time, the device may indicate that it is complete after ten or fifteen minutes. It is a normal phenomenon with the rechargeable batteries. You should remove the camcorder batteries from the device and reinsert it in order to repeat the charging procedure.

The dewalt 12v battery should be fully charged and discharged every two to three weeks. If you do not perform these functions significantly, it may shorten the life of your battery. For the discharging purpose simply run the device under the battery's power until it shuts down or you receive a low battery warning. You can also recharge the battery as instructed in the user manual.

If the dewalt 14.4 battery is not used for a month or longer, it is suggested that they should be detached from the device and stored in a cool dry and clean place. The charger should also be good whenever you are looking for your power tools. The Ni-MH batteries should be charged with a NiCad charger, unless the charger is specifically made for both chemistries. There is wide range of chargers available in the market. These chargers are some of the times cheap as well as expensive. You need to make sure that the charger you get has good reviews and is well made. The chargers embedded with the micro-controller chips are usually the best choice of your power tools.
