Different Applications of Variable Resistors by Julia Roger

Article published on June 28th 2012 | Business

Resistors are an important component of any electrical circuit as they control the flow of electricity as required. Owing to the huge demand of electrical resistors, many people are into manufacturing resistors. There are different types of resistors whichresistors that serve different purposes and have specific utilities. wire wound resistors and wire wound variable resistors are produced in different ratings and wattage. The variable resistors are sometimes are also used as rheostat with two connections.

It is called a potentiometer if all the three connections are used. The designing of the variable resistors are such that they can be either fixed directly on the board or they can be mounted by making a hole and fitting them. The Australian Resistors are the manufacturers of both wire wound and variable resistors. They have their own manufacturing unit to manufacture any kind or capacity of resistors. The machineries and equipments used for manufacturing are of the latest technology.

They have an excellent technical team to give the quality product and also the skilled personnel for best production output. Manufacturing is done using standard requirements. Custom required resistors are also manufactured as and when require by the clients. All the products manufactured are checked for quality before supplying. This helps in only the best product coming out from the production house.

The company has automatic testing and manual testing for quality which ensures 100% quality control. A further checking sample is done at random for achieving perfection. They offer different product range and also manufacturing is done as per the specifications of the customer. Standard specification resistors are readily available for purchase.

There are many companies manufacturing wire wound resistors and variable resistors. Australian Resistors is one of them giving good quality products and well established in the field.
