Embroidery Digitizing Tips - RB Digitizing by Roxan D'souza

Article published on July 23rd 2012 | Business

There are several tips that will help you get the most from your embroidery digitizing. You should experiment embroidery designs before making the real thing. This way, you will learn from your mistakes and successes and you will avoid ruining the real thing. Consider the type of embroidery sewing machine used since different machines are ideal for different designs. Take the density of the stitches into consideration when doing a digitizing job. If you are new at this, use less stabilizer under your design as this reduces the stitch density.

When doing the embroidery digitizing, the art work should be 3 to 6 times larger than the original. You could scan this into the computer and use such software as Adobe Inc.â€™s Photoshop to do the enlarging. Before you begin the digitizing, indicate the stitch density, stitch type, layout, stitch direction, and other parameters. Take note of the map or path as this shows you where the starting point, the end point, and the middle embroidery path will be.

Ensure you enter the coordinates of your design accurately into your computer. A â€œpuckâ€• is used for this. Invest in the right machine. You could get tips on the right machine for your particular needs through independent reviews, customer testimonials, and posts in discussion forums. You must also invest in the right stabilizers, needles, thread, embroidery digitizing software, and robin thread.

Read up on the common causes of improper digitizing. These include darker colors blending, thread break due to excessive backing materials, abrasive or adhesive fabrics, improper oiling of the machine, short stitches, and extremely high tension. Do not cut or tear away the stabilizer as this can damage your fabric. Consider hooping alternatives, especially when using stretchy fabrics. Another of the important embroidery digitizing tips is that you should buy machine embroidery hoops based on your design.

One of the most important embroidery digitizing tips is that you should consider hiring a professional for the job. The digitizing company you choose should have well-trained and experienced digitizers. It should offer different file formats and it should not charge more than $1.25 per thousand stitches.

Consider outsourcing the service to India. Indian embroidery digitizing services have some of the lowest rates in the world. Outsourcing the service gives you unparalleled convenience and you will be able to concentrate on running your business and it saves you money since you will not have to invest in the digitizing equipment and software. Outsourcing to embroidery digitizing services also protects your anonymity.
