An Essential and Legal Requirement

Escalators and elevators are known in common parlance as â€œLiftsâ€•. Both essentially serve the similar purpose of conveying people, materials and commodities between floors of a building. It is a convenience for ease of movement and is thereby considered to a necessity these days. However, there is a difference between an Escalator and an Elevator. An escalator is basically a moving staircase, where people stand on a step of the staircase and they are automatically transported through a motor driven electrically operated device moving on tracks where the steps remain in a horizontal position. Elevators on the other hand are vertical transport systems that are also operated electrically through steel cables. Elevators are manufactured with cabins where people enter and leave on the floors of buildings. There is a widespread use of elevators in almost all the buildings specifically in the commercial districts of metropolises. Elevators and escalators have become both a legal and mandatory requirement in multi-storied buildings since they offer a convenience to people visiting a building and need a certificate to its satisfactory performance periodically.

Indigenous Manufacture

Escalators and elevators serve a broad spectrum of the high rise edifices in metropolitan cities in the country and are used for countless purposes. Yet, the primary application of escalators and elevators is its widespread use in buildings for easy moving of people. The installation of escalators and elevators is particularly to seen in shopping malls, railway stations, buildings and even in residential complexes. With the rise in infrastructure development in the country itself, there has been an increasing demand for elevators and escalators giving a rise in the production of elevators and escalators in the domestic market.

The Export Market

India is one of the most advanced countries in the developing world and could easily be considered as one of the highly industrial nations in the world. With its thriving multi-faceted industry, it has also achieved an unrivalled position in mass production of various advanced industrial gadgets which include escalators and elevators. There is a plethora of both escalator manufacturers as well as elevator manufacturers in the country. Some of the reputed manufacturers such as Otis and Beacon and Olympus Elevators have entered into the export market and are well known elevator exporter as well as escalator exporter in the country. Escalators and elevators are one of the major export items which are exported to various countries across the globe. India has gained a leading edge amongst other exporting countries and has become one of the leading exporters of escalators and elevators thereby grabbing a substantial market share in the export market.
