Article published on May 18th 2012 | Business

If you've read one of Tom Clancy's novels, you're probably familiar with federal agents who use clever tactics to obtain or protect certain crucial pieces of information. With the help of technology, however, gone are the days when an army's Intelligence Division still needs to use complex codes to reduce the risks of data leakage. The military and other government or private agencies today have the privilege of using Sensitive Compartmented Information Facility (SCIF) or Red Room, an area where classified information can be discussed, stored, or electronically processed.

What's more amazing is that SCIFs these days can come mobile. While government agencies normally have a dedicated room where they process and deal with classified or restricted data, building an advanced SCIF in an existing building can be more expensive and inconvenient. Some military personnel experienced in handling restricted information thus developed a mobile SCIF or command to ensure a higher level of security for an organization.

A mobile command center SCIF is specially constructed to deliver more powerful solutions for private and federal organizations. With heavy-duty suspension system and enhanced frame, a mobile SCIF provides size and configuration flexibility. It meets federal guidelines and may even include a warranty and telephone support for optimum convenience.

Having a mobile command center is faster and more beneficial as it is built from the manufacturer's garage and not on a company or agency's premises. One's business will not be affected because of the construction, avoiding down time and possible work disruption. This stand-alone unit can also be relocated anywhere power and communications are available, spelling out extra comfort and convenience. A turnkey SCIF is also accredited by government agencies to ensure success and efficiency in protecting classified and restricted organizational data.

Likewise, a mobile command center trailer is secure, unobtrusive, and portable. It can be deployed and set up at disaster and emergency sites, and it works with simple power and communication devices. It also delivers habitability and physical security advantages for basic needs of personnel and technicians.

Unlike tents, a state-of-the-art mobile command facility provides protection from the elements, giving its users an environmental shelter. If you need a versatile SCIF for your company, you can contact local specialists or look for credible providers online. Research about a provider's experience to ensure quality tools and services for your organization. With information as one of today's most powerful business fuels, you need a reliable mobile SCIF constructed by professionals to protect your interests and ensure success.
