Article published on June 12th 2012 | Business

If you want your kitchen to have a modern yet glamorous feel then glass kitchen countertops can do the trick. It can give your kitchen that unique look that youâ€™ve always wanted. Though glass has more chance of getting damaged, proper care and maintenance can make it durable. Glass is also less expensive than granite and other natural quartz but you can experiment a lot with glass. Every design looks great in glass and no matter what your floor color is or what the shade of your windows and walls are, there are absolutely going to suit.

Today, there are recycled glass countertops available in the market. They contribute in your efforts of going green. At the same time, many of them have less functionality, which you should avoid. There are certain benefits of glass countertops which need to be noted and searched for while buying your kitchen countertop.

- Glass is a great work surface. It is even, smooth to tough and keep things on it.

- Most of the glass kitchen countertops are made from thick glass. These are heat resistant just like granite.

- They are hard and beautiful. The beauty is not compromised while making it strong. They are built appropriately for kitchen use.

- They can always be a conversion piece as many are recycled from bottles, glassware or anything else. It looks great and it can also be green.

- It is very easy to clean the glass surface. You donâ€™t really require any other maintenance for the same. Just a mug of soap water and sponge will be enough to clean it up.

- They are not prone to stains.

- They are less prone to fungus and bacteria.
