Article published on December 13th 2011 | Business

If you are looking to decrease the resale worth of your residence, there are a number of things you can do to perk up septic tank systems.

Septic Tank Pump: Before you begin to fetch prospective buyers to your home, you should have your septic system pumped by a professional to get rid of the accumulated sludge can make septic system to stop functioning properly. You should also have the examination system to make sure there are no problems with the system, such as leaks, damaged pipes, poor mechanical components, etc. If there is a problem you should fix any problems before putting your home on the market.

Consider Acquiring a Sewage-Ejector Systems: These systems use a septic tank system to collect wastewater with the help of gravity before being pumped. The advantage of ejector sewage systems is that they allow owners to maintain water facilities such as lavatories, toilets and showers on a normal floor level, which maximizes comfort and space.

Retain Your Drain Field: Make certain you have good care for your drain field. This includes keeping the roots of trees and shrubs out of the drain field to prevent clogging and damage the drain field. Also, do not drive or park vehicles on the septic system because it will compact the soil in the drain field. It can also cause damage to the tank, piping and other components of the septic system. Keep sump pump drains, roof drains and other surface water systems draining the drain field, which can cause flooding of drain field that may affect the treatment process and even cause the wastewater to the backup in the plumbing system. Drains, and floor drains, garage drains, roof drains etc., should be placed outside the house and drain field.

Septic Tank Care: There are several things you can do to keep your septic tank in good condition. Regular addition of bacterial additives increases the digestion and decomposition of sludge, bio-solids, and foam. You can also install an effluent filter. This is a filter that is installed at the outlet of the septic tank. The benefit is that it will improve the quality of wastewater discharged into the drain field. Sand filters and wood chips from two types of filter effluent. Â Are placed between the septic tank and drain field bed to improve the quality of wastewater discharges entering the drain field. Â Aerobic sewage treatment system units are another good option. These devices are installed, either before or after the septic tank. Air is pumped into the waste to promote aerobic microbial activity. A mechanical pump is used for aeration. The benefit is improved effluent quality and extends the life drain field bed.

If you plan to sell your home or you want to maximize their worth, it is significant to believe civilizing the septic system. Properly functioning septic systems and good quality of poly water tanks certainly please potential buyers and increase the resale value of your home.
