

Article published on April 15th 2012 | [Business](#)

Infrared ip camera, surveillance cameras, the development of increasingly prominent, from complex to simple, from the plain to the intelligent. Step by step proof of the rapid technological development. Thus, the Shenzhen surveillance camera manufacturers also followed should the world into the sky. Small, medium and large manufacturers everywhere.

Traditional security applications on the market, mainly used in the field of public safety, such as network ip control, product applications, and no true sense of the popularity. The real security applications should be spread to family, spread to every individual. Breakthrough in the key of the security market lies in the individual, not just stay in the public security system. In the United States and Europe, the family-based security awareness is extremely high, therefore, the network cameras and home security equipment is very widely used in the family field. With the improvement of living standards, people's awareness of security have been improved, which is a breakthrough in the security market, the potential business opportunities of home security needs to be further developed.

Bandwidth is the last word

With the development of security technology, the maturity of the security market, as well as policies and regulations of the improvement of security industry trends, can be summarized as "four modernizations" market-oriented, social, scale and network mini ip camera A breakthrough in the application level is mainly reflected in the remote network management and use of this aspect. But to reach a network of remote management and applications, no easy task. This requires good bandwidth signal bandwidth in this stage the city can not fully meet the wireless ip camera development system, it is recommended that individual cities have a certain economic base to establish the Internet of Things.

The sudden emergence of civil security

Civil security best ip camera is a breach of the security market, the domestic security technology has been able to basically meet civilian needs. Civilian security home security as the core use areas, the key to its application of technology has been transferred to the network level. From the consumer's point of view, the only individual not family or store security products use space. But the only tool for remote management and monitoring of the online use of a breakthrough. In summary, the promotion of security awareness and the protection of the transmission channel is the last word of the security applications.
