Hard-Sided vs Soft-Sided Luggage: Which Camp are You On?

by Abigail Schoorl

Article published on May 17th 2012 | Business

Most travelers experience that moment of panic when theyâ€™re standing beside the airportâ€™s conveyo belt while waiting for their baggage to show. The reason for this panic is because they dread two possible scenarios: one, their bag would arrive dented or slashed open with their underwear hanging out; or two, their bag wouldnâ€™t show at all. Either of these possibilities constitutes every travelerâ€™s nightmare, which is why steps have to be taken to prevent it.

Choosing the best type of luggage for you and the way you travel is a great place to start preventing potential problems. When you have the right type of baggage, chances are you wouldnâ€™t have to worry about those pesky baggage fees or lost luggage. There are several considerations, though, when choosing what type of luggage youâ€™re going to carry. One of the first questions that every traveler has to answer is: hard-sided or soft?

The debate about what is best between hard-sided and soft-sided luggage has been going on for years, and though most people prefer the latter, hard-sided luggage still has a loyal following. But what exactly do these two have to offer? Here are some of the advantages and disadvantages of each.

Hard-Sided Luggage

Airport personnel break around seven to eight pieces of luggage for every thousand items they handleâ€”this might not be a big figure but itâ€™s not something most people would risk. This is where har sided luggage comes in handyâ€”their tough outer shell protects everything in it, which is why hard-sided types like Rimowa luggage are preferred by people carrying computers and other sensitive equipment. These luggages arenâ€™t very flexible though, which might stop you from stuffing in that extra beach towel.

Soft-Sided Luggage

This type, represented by famous manufacturers like Tumi luggage, is preferred by most people for two reasons. The first is that it is easier to pack with soft-sided luggage because they are more flexible; the second is that this type doesnâ€™t crack or shatter when dropped. The only drawback is the contents arenâ€™t as well-protected, and broken zippers and rips are common occurrences.

Whatever type you choose, be sure to buy only from trustworthy stores. Make sure that the Rimowa or Tumi luggage sale youâ€™re stopping by at sell real Rimowa or Tumi products. Getting substandard luggage might result in a lot of problems down the road.

Whether you choose soft-sided Tumi or hard-sided Rimowa luggage, remember that how long these would last depend on how you use and take care of them.
