Hot Water Adelaide - choose the right system by [Sahotwater](#)

Article published on March 20th 2012 | [Business](#)

Hot water heating can total a quarter of a household's energy consumption. It's important to research a household's hot water usage and understand your options so that you install a hot water service that saves money and energy, and is environmentally friendly.

Don't wait for your Hot Water System to go - because they can go with a trickle or a flood " and they often go suddenly - leaving you with cold showers and without the luxury or convenience of time to review all available options.

Hot water systems are a necessity in a home and the professionals at Hot Water Adelaide are considered to be one of the most reliable, effective and cost efficient hot water system repairers and installers in Adelaide and surrounding regions.

About Hot Water Adelaide

This locally owned family business, started in 1985, install and repair hot water systems in Adelaide. Over the years they have proven themselves to be the leading supplier of 5 star energy efficient hot water systems from the top hot water system manufacturers. Hot Water Adelaide use and repair the leading brands of hot water services such as Bosch, Rinnai, Rheem, Vulcan, Dux, Aquamax and many more.

Their technicians are highly qualified, and they also make sure that every client appointment is convenient for their customers.

Hot Water Adelaide services

Hot Water Adelaide offers 3 types of water systems. They service and install electric hot water systems, solar hot water systems and gas hot water systems in Adelaide and the greater metropolitan area.

a. Electric hot water systems

This is one of the most common systems installed in most homes in Adelaide. There are day and night rates. Commonly the day time heating rates are the highest and the off-peak or night rates are the cheapest. Hot Water Adelaide offers models with adjustable thermostats in order to control the temperature even when the hot water is not in use.

b. Solar hot water systems

For clients who want to reduce electricity bills and help save the environment, solar panels are the way to go. Opting for this service from Hot Water Adelaide assists in reducing your energy bills whilst saving greenhouse gas emissions. Although the initial set up may be considerable, over time, the cost is amortised through much reduced electricity bills.

This type of hot water system can provide up to 90% or more hot water - without the use of electricity - depending on the climate and the model and tank storage chosen.

c. Gas hot water systems

Hot Water Adelaide offers 5 top brands of gas water systems. Rheem, Bosch and Aquamax have small gas water system storages that can be mounted in a cupboard or in the wall of the house. These smaller storage systems offer low running costs as compared to larger units.
