Article published on January 10th 2012 | Business

In the old days, factories and offices simply had fans and exhaust fans to circulate and take out the stale air from an office or a factory. Workers would toil hard in difficult and extreme environments (including mines) to get the job done. Gradually stale and polluted air often would take a toll on industrial workers in terms of health and work morale.

Over the years the work environment has slowly and steadily changed. Laws and unions are in place to protect workers from health hazards and inhumane work conditions. Offices have now become more comfortable and employee health has been given a higher priority when compared to the past.

HVAC or Heating, Ventilation and Air Conditioning systems today have changed the work environment for the good. Modern HVAC systems keep on improving technologically; helping employees become more productive and live healthier lives.

HVAC systems cover a rather broad area which includes heating systems, ventilation systems, and air-conditioning systems for both offices and factories. This is why equipment is often built keeping in mind a specific application which often cannot be exchanged for another one, once set in place.

Ventilation systems for example, are built differently for offices where the â€˜stale airâ€™ would be a lot less harmful when compared to a factory environment where the number of pollutants in the air is a lot higher. Hence ventilation systems built for factories and manufacturing environments are built tough to take care of any harmful gases and chemicals which may escape while processing or handling the chemicals.

Global Trust Enterprises a general trading company in Dubai have been the supplier of choice when it comes to HVAC systems. They provide their clients in the Middle East and North Africa region (MENA) with quality HVAC equipment from world renowned brands. What makes them different from other suppliers is that they pay individual attention to their clientâ€™s needs and apply their years of expertise in selecting what fits the application best. Apart from HVAC equipment, Global Trust Enterprises also deals with industrial chemicals, a wide variety of industrial equipment and spares; industrial lubricants and greases in the Middle East.
