In order to understand China's current economic situation, a correct understanding of the hot and difficult, the focus of economic operation, grasp the development trend of Machinery Industry, China Machinery Industry Federation every year, timely organized the machinery industry economic situation report will be.Its purpose is to safeguard the interests of enterprises, promote the development of the industry, to ensure industrial safety. "Mechanical industrial economic situation "has been held for 15 years, the role of a positive, significant effect, more and more concern and attention both inside and outside the industry and the counity.Especially since the 2001 reform of government institutions, it has become relevant government departments and industry and corporate communications, industries and enterprises to keep abreast of the country's current macroeconomic environment and related policies and measures, to discuss the economic operation in the hot and difficult the focus of the importance of platforms.Cai Wei-Tze, executive vice president of China Machinery Industry Federation, in the report introduces the overall trend and the operational characteristics of the machinery industry in 2006, next year in the form of, and made a few suggestions.He said "Overall, the basis for sustained high growth industry in recent years, this year, the machinery industry maintained a good momentum of development, development of the industry shows three distinct trends: First, production and sales continue steady and rapid growth; The second is the continuous deepening of structural adjustment: rapid reduction in the import and export deficit.He said: Looking ahead, the machinery industry is still expected to achieve double-

digit growth.Meanwhile, the development of the industry there are many hidden dangers; the revitalization of the main weak and unstable; growth pattern unhappy; independent innovation capacity can not meet the need for upgrading of the structure; the bottleneck of the main raw material supply is becoming increasingly strong.Proposed machinery industry enterprises should seize the opportunity for continuous improvement, constantly updated according to current production technology and equipment, but also to focus on the long term, determined to strengthen the R & D capacity building, not only should pay attention to the introduction of technology, the introduction of talent, but must be determined to nurture their own The core technology R & D talent and highly skilled personnel.
