This process of re-cycling includes three sub-sequent stages which are as follows:

if~ Collecting and sorting

if~ Manufacturing a new product

if~ Selling of the new product to the customers.

When the product that the consumers bought already served its purpose, the recycling process will then again continue as these products are collected.

Re-cycling is gaining importance in our daily life for a number of reasons. Due to its overwhelming success in reducing pollution, economical benefits amongst several other positive impacts, marketing world is also tending towards this cult.

Several companies are trying to play their role in saving their surroundings from the harmful effects their products might cause. Some times we are ignorant of the fact that how a small product developed for human benefits can cause a catastrophe in the atmosphere if accumulated.

RE-CYCLING EMPTY PRINTER CARTRIDGES:-

Printer cartridges are made up of plastic. Plastic is a petroleum-based product and takes about 1,000 years to decompose. Every year millions of these empty inkjet cartridges are thrown into the refuse bin. These may end up in landfills or incinerators. Every year, thousands of empty toners and inkjet cartridges are thrown away in the trash as waste without being aware of the fact that it is causing many harmful effects on our surroundings in which we are breathing.

Many companies are providing the facility for the recycling of these printer cartridges. These companies also provide their online service to re-cycle the printer cartridges at affordable rates. GREEN TECH RECYCLING Company is another name in this regard. Green Tech Recycling Company have been collecting, recycling and remanufacturing inkjet and laser toner cartridges in the United Kingdom for over 10 years and estimate to have saved the equivalent of 5 million litres of oil or 147 football pitches worth of waste printer cartridges.

REFILLING OF TONER CARTRIDGES:-

GT recycling has a large number of professionals who have the potential to accomplish the task to recycling toner cartridges. One of the main purposes behind recycling toner cartridge is that in this process about half of the money is saved that is used to buy a new one. In addition to this, recycled cartridges offer highly effective cartridge that includes better ink usage.

TONER CARTRIDGE RECYCLING:-

toner cartridge recycling do a lot of good to the environment, .besides this it has other benefits too. Re-inking recycle cartridges conserves landfill space, reduces greenhouse gases and conserves raw materials. Recycling 100,000 toner cartridges saves 9,599 kilograms of aluminum, 1 million liters of oil and 40 tons of plastic. Another benefit of recycling toner cartridge is that it saves thousands of tons of plastic and metal every year.
