Importance of recycling in our everyday life: by [Jullia](#)

Article published on December 15th 2011 | [Business](#)

It not only helps to lower the cost of production to a minimal level for a development or a production company but it also prevents large amounts of materials being dumped into landfills and streams that enter our life cycle through marine or other sources and inevitably become a part of us thus disturbing our natural habitat.

Moreover, the industrial boom has seen introduction of various types of products that involve non-biodegradable materials as their products which once thrown out in the open may take hundreds of years to decompose due to their inertness towards bacteria and other parasites. Other than the impending threat towards our surroundings, wasting products due to their incapability to produce desirable results and throwing them out in the open is a proof of ignorance of our society's morals and ethical values as it undermines tremendous amount of energy and material costs.

Numerous companies have come forward offering a possible solution to this epidemic using various processes of recycling. As thousands of institutions and companies use printing technology for their records and office use, it is inevitable for cartridges to be wasted due to negligence of many. According to a stat more than 55 million used toner cartridges go into the landfill which makes printer cartridge recycling all the more important.

Greentech, a company based in U.K, has been in the recycling business mainstream for the past 10 years and provides Toner recycling: a process through which we can not only control the outrageous amount of non-biodegradable products being injected into our atmosphere but also can minimize production costs for their remanufacture.

Normally cartridges are re-filled up to four times and then are mostly refurbished afterwards. It is cost-efficient, customer friendly and environmentally friendly. They also recycle laser toner cartridges. Instead of wasting cartridges, one can just contact greentech through email or landline which pay handsome amount for cartridges that are past their lifetime or are worn out. Mostly they pay around 12 pounds per cartridge (visit www.gtrecycling.com for more details).

Along with laser toner recycling facilities, Greentech also recycle ink cartridges. Their brisk collection and swift payment is a proof of their credibility. Greentech currently recycles around 27000 cartridges every month. It is run by a dedicated bunch of professionals who are aware of the need of the common consumer and never lets their customers down. To top it all off, GT recycling company also provides free courier services for a minimum of 20 pounds of recycling along with countless other services the company provides. Undoubtedly if a customer is curious about what to do about his cartridges, Greentech is the company to be contacted due to their exemplary history with the subject.
