Altium design refers to the design of a specific type of circuit board. Altium is a company based in Australia, and their design of circuit boards is famous worldwide.

Altium design recognises that, just as the world is not flat, neither are the circuit boards you design. Using Altium design, you can instantly see 3D images of the board, along with the loaded components and sub-assemblies. You can view and edit the board in full 3D with the simple click of a button. Using Altium design in this way ensures that your designs are faultless before manufacturer begins and that all teething problems have been ironed out ahead of production.

Using Altium design for your circuit board means that your circuit board stays in completed synchronisation with your source schematics at all time. An Altium design also guarantees that any changes made to the circuit board and automatically reflected back to the schematics. Altium design also uses intelligent tracking to map out the path you want to take and complex routes can be planned with the click of one single button.

Altium design contains a graphical design environment that way outstrips any of its competitors. The user friendly graphic design element ensures that your circuit board design can be connected to other areas in design and there is complete synchronisation with all elements. Altium design brings you the power of unified design. Another useful aspect of Altium design is the fact that it tracks any changes, saving previous versions meaning you can roll back to older versions if needed. This feature gives you the ultimate power to experiment with cutting edge design.
