IT Support Company in Orlando Offers Five Protected layers for Network Security by Mark Thomson

Article published on February 29th 2012 | Business

Promising high-end IT security and efficiently managing IT services could be the known statements found in all contracts. But, there is one IT support company based in Orlando that have marked its presence by fulfilling all commitments to clients in industry. Every service offered by the company is well-managed, systematic and well-defined. Confusions, delays, mishaps and extra cost are the terms which do not exists in contracts through out the tenure. On-time, quick, efficient and budgetary expenses are default specification offered along with fantastic services by the company.

In IT services, security is considered as the most prime factor. Therefore, IT support company in Orlando provides unbelievable IT security services to protect clientâ€™s data and information from theft and hackers. Letâ€™s understand the procedures which IT support company in Orlando follows:

â€¢ Physical Security: The server racks and server rooms are properly equipped with modern security system which prohibits any invalid access into the rooms. The infrastructure is well-planned and well-designed to protect the servers and other peripherals from any man-made disasters. Proper locking systems and security is implemented in the server rooms.

â€¢ Firewalls: The network is completely protected and secured by latest and most efficient firewalls. Any invalid access into the network or data interceptions are traced and eliminated by strong firewall configurations. The network engineers who manage and configure firewall systems are highly qualified and experienced.

â€¢ Security Software: The security software provides a shield when data is transmitted across the network. Also, the security software logs every valid and invalid access to the folders, data and network by the onsite and offsite users in the network. Thus, along with firewall security, the security software also adds best possibilities to make the networks physically and virtually strong and protected.

â€¢ Password & Authentication: Password policies such are strictly implemented in the network to stop leakages of passwords. Passwords are changed every after some fixed duration in servers, desktops and other network devices. Thus, any invalid access is automatically gets trapped and find authentication denied.

â€¢ Data Loss: Implementing all such things by IT support company in Orlando helps protecting data loss. Usersâ€™ data, company information and other details are best protected with the help of firewalls, data security and password authentication by the managed IT services in Orlando.

So, the Orlando based IT support company not only protects data, but also make your network security systems unbreakable by the hackers. To learn more check the details online.
