Knobs Handles â€“ Complete Satisfaction

by Quinn White

Article published on May 25th 2012 | Business

The world of knobs and handles is enormous, with a good deal of options and varieties out there, up for the taking for the choosy and for the savvy. Knobs and handles are much more than just commodities which are available at your disposal, where you could pick some and drop some, without being bothered about the selection part of it. To the contrary, there is so much to accessories in the two categories that you would be at a loss as to which ones to choose and which ones to give a miss. Knobs are made with the intention of giving a firm grip in some instances and to provide gentle ease of use in others. Similarly, there is such a wide range of options available in the case of handles as well, with so many considerations having gone into their design and manufacture, each of them with the customer and their consumption and usage patterns in mind. The underlying idea is that knobs, handles and other accessories are not just for their functional value but are also for their aesthetic feel.

The guiding principle that has gone into the design and manufacture of knobs, handles and other products is that they should be easy to use and should be strong enough to handle all kinds of impact that you would expect them to take on. Primarily, the material that goes into making of knobs, handles and other such accessories should be able to stand the test of time when exposed to grease, dirt and oil and even fuels. There are both male as well as female versions available among all the different types of knobs and handles, along with other options such as high gloss finish or matte finish, as you may fancy having them.

Of knobs and handles, while the former would be made of TPE Overlay and polypropylene glass filled base material, black nylon, Phenolic and the like and the metal component would be made of zinc-plated brass insert, the different kinds of handles could have arisen out of raw materials such as black powder coated die-cast zinc, polypropylene with glass reinforced fibres, nylon and zinc plated steel studs and inserts. With knobs, handles and other products, it is not just the comfort that you draw out of using them, but also the stress that they are able to take and the ease with which you could maintain them, along with the sense of pleasure that you draw out of their aesthetic appeal, which matter as a whole.
