LDAP Firewall in a Virtual Directory Means Saving Cash by Leila

Article published on April 13th 2012 | Business

It will be a waste of investment in case you get separate LDAP firewall or proxy for the security of one's directories and databases. This is specially true using the availability of a virtual directory that will function as a proxy or firewall. In this case, you will not have to get an additional separate service. The best thing about it's that even when it really is utilized to obtain consolidated view of data, or as proxy for your environment, it truly is lightweight so it will not have influence on your directories. Instead, it even helps boost their accessibility, scalability and availability.

You just have to be cautious though due to the fact even when you'll find a lot of virtual directory vendors out there, they've diverse capabilities and functions. You need to select one that has extremely helpful features. Once you choose the correct virtual directory server or VDS, you will be capable of gain far more controlled and secure method of getting data from your directory services by means of a secure web application, the web or extranet. It provides several functions which can be exclusive from separate proxy and firewall services.

A virtual directory server can also leverage your existing Active Directory infrastructure. This can be one particular of the unique functions a virtual directory has. Using the characteristics and capabilities it has, organizations favor this over the other technologies of consolidating information views. It really is a lot a lot more effective and quite effortless to utilize. The truth is, it has some automation capabilities wherein it will not call for significantly management and monitoring, helping you save on your IT costs.

A lot of experts are recommending the use of a virtual directory more than other technologies as a result of its exclusive and very helpful properties apart from those mentioned above. For instance, it can be utilized if you desire of migrating from Sun directory server into yet another directory or platform. Some companies have discovered this to be difficult and time consuming to do. But with the ability of a virtual directory sever to emulate Sun directory, migrating your data will no longer be a hard factor to do. From Sun directory server, all of your data will be migrated to another directory such as LDAP directory.
