You are standing in the wind, you can feel the pressure of wind on you, throw a

boomerang into it, and you will find how it spins in the air and returns to you. Throwing and then catching the boomerang is an art, since there are different types of spinning variations, which will determine how it will act in the air when it is thrown and how it will get back to your hands. With an aboriginal boomerangs, you can achieve the art of throwing and catching it.

There are a few methods you can follow to become a pro. Just like tennis, where you have to hold the racket properly to make the perfect swing you have to hold the boomerang in a strong grip so that you can throw it in air without fault. The â€˜cradleâ€™ grip is a particular style where you have to use your forefinger round the boomerang. When slight â€˜pinchâ€™ is exerted on the grip, it is called the â€˜pi style. Both the styles will determine how well you can throw the boomerang.

Your next step is to determine the direction of the wind. Remember, there is no point in throwing a boomerang just like that without caring about the direction of wind. Throwing an Australian boomerang on the right of wind direction would mean a clever way of using the boomerang to let it get into your grip once again.

Now, when you are throwing the device, you have to imagine a person standing a few meters away from you. Now you have to throw the device according to his head level. This would hit your target perfectly. Before letting the aboriginal boomerang or Australian boomerang out of your hand, snap your wrist and let go off it. You will find the device finely spinning in air and then getting back to your hand. Therefore, there are many things to be taken care of to ensure that the boomerang returns to your hand and you hit the target successfully.
