Locating the Right Kind of Loading Bays and Sponge Rubber Products by [Maria Gini](#)

Article published on March 28th 2012 | [Business](#)

A loading bay is a critical accessory for transporters and for warehouses since not every warehouse has a large docking area. Nowadays loading bays are used for more commercial and industrial operations, when goods and assets including machinery needs to be unloaded and transported on site. Often the infrastructure and service of handling materials really happens inside warehouses, factories and industrial units every day that can be directly linked via elevators to storage and staging areas.

Therefore you need to be certain that the people from whom you source your loading bay have a certain level of reputation in the market. Ideally they should be able to offer a standard range of polyurethane loading bays but can design and manufacture them to suit a customer's specific requirements. Check out their experience in design, development, prototyping and manufacture of loading bays. Cork and felt loading bays are also used for more commercial and industrial operations, when goods and assets including machinery needs to be unloaded and transported on site.

There are several kinds of sponge rubber products, of which sponge rubber do-nut rings used by the majority of original equipment manufacturers in Europe are critical. These do-nuts are used in a wide range of agricultural plant and equipment from potato harvesters to grading and handling equipment. Check to see whether they can provide both open cell and closed cell sponge rubber "Do-Nut" ring options to suit the customer's requirements. Other critical products in which sponge rubber is utilized include carpet underlays and insulation layers.

Some of the most obvious and most important considerations in selecting a good sponge rubber or plastic foam manufacturer are having ISO certification, willingness to offer free samples and testing, and offer technical assistance when you need it. The right manufacturer of sponge rubber products would be the sort of company that shares your priorities and your goals, a company that puts people first, giving them the training and support they need to make sure their customers get the satisfaction they need and expect.
