Make a Call Using VOIP Telephone System by Micky Botter

Article published on March 5th 2012 | Business

Every internet professional must have heard about VoIP technology. VoIP stands for Voice over Internet Protocol, This allows you to make call with your telephone by utilizing internet connection. Moreover after downloading and installing VoIP Apps, Cell Phones can also be used to make calls with the help of this technology. This is the latest innovation in information & communication applications and being used as the best alternative to traditional phone systems.

The fundamental and best part of this technology is the budget. It is very inexpensive; you can make long calls even across the continents. Therefore, businesses and individuals prefer VoIP system over traditional phone services. If we talk about call packages and price plans, you will find a long list of service providers in the market offering many additional features such as number portability option, unlimited free minutes and many more.

After the inception of VoIP technology, consistent growth has been seen in the industry. There are many companies which provide customer oriented packages that are plausible, rational and affordable. If you still find it a bit difficult in making decision about the service VOIP providers. Have a look at these points that will help you in choosing best company of VoIP services as per your needs and budget.

Some of them are Number Portability, Set up fee and money back guarantee. You will see many free packages kinds of announcements from companies but real thing is that in terms of service charge or set up fee, you have to pay a lot. This will increase your communication cost initially. In future, whenever you want to switch to a new company. There should be the Number Portability option because everyone wants to keep old number to stay in touch with old clients and fellows. At last you must ask that is there any Money back guarantee or not? This will help to save your investment if company does not meet you expectations and promise.

Since in case of VoIP phone service there is also a possibility of hacking like any other internet related system, hence Security comes first. You must make sure that caller Id, free calls or fax handling features are available there. Quality of Service is the most important factor to consider always in comparison with free calls, free set up and all other things. Because no one likes background noise or getting call disconnected frequently. Call disconnects only due to power failure. Therefore, there should be an emergency calling or forwarding facility for the consumers in case of power failure.
