Make Life Comfortable with Shower Chairs for the Elderly by James Blee

Article published on May 24th 2012 | Business

Rolling shower chairs are very beneficial for patients. When a patient is back from the hospital, he or she needs all the help that is wanted. However, there are times when the patients need extra care and support and one such time is that of bathing. There are cuts, wounds to be avoided, and fractures to be taken care of. So that support can be given with the help of shower chairs. They are especially designed chairs that are not only waterproof but they have joints and hinges that makes them turn at strategic points so that the patient can have a good bath, without getting hurt.

The Shower chairs with wheels are most commonly available. You can take them right next to the edge of the chair and the patient can lean on them for maximum support. They are very strongly built and some are especially designed to take weight of 700 pounds or more, more especially obese patients. They have leg rests and arm rests that can be adjusted according to the needs of the patient. It has to be said that the chairs can also be used as wheel chairs outside the bathrooms. These versions can be a little more expensive but they come in very useful, especially for those who do not have much experience in handling patients in the post hospitalization period. They are mostly built from strong aluminum and stainless steel and have water proof cushions, so there is hardly any trouble with drying it after the shower is over.

If you have n elderly patient in the family then these shower chairs with wheels will definitely be of great help to you.
