Method to Convert MP4 toAVI forMac Device Users by Ricky

Article published on December 13th 2011 | Business

AVI is basically a video converter file format that is being used by the operating systems since the time of Windows 3.11. However a whole lot of improvements have been made in AVI format f that time, as it has come up with a great number of extensions from time to time as per need.

AVI is normally used to share videos over the internet, just because it allows the entire procedure to be smooth and fast and these days you will only see the files over the internet that are with extensions of DIVX or AVI. However in order to store a file of AVI format in DVD you need to make it DVD compatible before you burn it.

Devices that support AVI formats:

There are a great number of devices that supports AVI format, some of them include:

iRiver PMP:

iRiver PMP is known to be a portable device that allows you to play HD games, play videos and music etc. hence it is a complete entertainment tool. iRiver PMP supports a great number of video formats including DIVX and AVI format, allowing you to play your file as soon as you will download it from the internet. You don't need any other type of converter to play AVI files in your iRiver PMP. iRiver PMP is equipped with 20 GB hard disk, allowing you to get a plenty of space for your audio and video files. Other than that iRiver PMP has a durable battery which lasts for five hours for video files and up to 16 hours for Audio files which allows you to get a maximum entertainment time with lesser breaks of charging your iRiver PMP battery.

Archos:

Archos is another portable device which is known for its storage devices and digital video players. Archos is way much different than every other portable device, just because it not only allows you to see yourfavourite videos, but it also allows you to create as well as edit your videos. Archos can support a great number of file formats including AVI, which allows you to play your AVI file as soonas you download it from the internet.

Converting MP4 to AVI for Mac users:

In order to convert mp4 to avi on mac , all you need to do is to follow the following steps:

Â· Go to the Menu Bar of Video Converter and choose the "File" option, after going into the option of Files select "Add Audio Files", however if you want to add a Video File then go with "Add Video Files" in order to import it.

Â· Select you desired MP4 files which you want to convert in AVI format. However it is highly recommended that you should preview the files first before you start conversion.

Â· Afterwards press the device icon that is found behind the file, over here you will select the output format for your file.

Â· After that all you have to do is to press the Start Button, and as soon as you will do it your MP4 files will start to convert in Mac!

These are surely very simple steps in order to convert mp4 to avi mac for meeting your requirements!
