New Characteristics and Enhancements of Virtual Directory by John Ozoa

Article published on March 15th 2012 | Business

Most organizations today feel fortunate using the continuous innovation and improvement in a virtual directory they are utilizing. With far more enhanced features and capabilities, a variety of benefits await for these organizations to be enjoyed and taken advantage of. For instance, some of the best virtual directories in the industry supply automation components that allow users to have an effortless way of implementing the directory and in reflecting the adjustments they need to make not simply in the main directory however it its underlying directories at the same time.

This is specially true with those organizations that have many LDAPs that could have been otherwise hard to accomplish with out the use of virtual directories. Another benefit of a virtual directory is it gives the users with the ability to search on various multiples not merely the user ID simultaneously.

They also have a list of attributes that will be very simple to configure to return to the users. The results can also be sorted with the use of a virtual directory server. This way, following making queries in the different databases and data stores, the results are arranged per category creating it simpler for the user to locate what they are trying to find.

The most effective virtual directory is also a single that has user friendly interface which contains paged grid view making it less difficult for users to locate the data they may be searching for without getting to navigate through the pages that could take them a great deal of time. Via a virtual directory, the administrators obtain the potential of applying distinct filters on the results according on the group memberships. They're also able to develop search templates are that utilized commonly for searches.

Finally, administrators are in a position to apply the different filters for the permission on searches. Of course it has often been known that a virtual directory also acts as LDAP proxy. What it does is generally keeps the data and their retailers safe and secured for any possible access and searches that's not permitted by the administration. In this manner, information leakage is prevented, giving administrators and operators with peace of mind.
