Plastic Adirondack Chairs- a Chair for All Seasons by Ackchairs

Article published on February 10th 2012 | Business

Plastic Adirondack Chairs, construction using a resin composite thatâ€™s harvested from recycled milk bottles, are arguably the smartest choice when it comes to patio furniture. Since the advent of resin Adirondack chairs in the 1990s, this style has spread like wildfire to backyards across the United States. There are many reasons that this trend has gained such traction, which will try to outline for you here.

For starters, it is no coincidence that plastic Adirondack chairs are some of the most reliable patio furniture choices in todayâ€™s outdoor furniture market. It is tough principally because it blocks out virtually all moisture, making it tougher than some of the densest hardwoods in the face of harsh weather.

Now, you may question how sturdy plastic Adirondack chairs really are, particularlyif your childhood backyard was outfitted with that flimsy plastic patio furniture that was so popular a couple of decades ago. Rest assured that plastic Adirondack chairs of today are nothing like the set you sat on once upon a time. If you have an opportunity to see them in person, you will notice immediately they are quite dense and heavy, so they wonâ€™t blow off your deck when the wind picks up. But youâ€™ be able to store them away or stack them with ease when you need to. If you prefer stacking, look specifically for stackable plastic chairs. They are available within many patio furniture lines.

There is a major difference between run-of-the-mill plastic patio furniture and resin Adirondack furniture. Resin Adirondack Chairs are a cut-above the rest in terms of style and durability. Top-quality construction and a wood grain veneer make it very difficult to compare with that shiny plastic patio furniture you grew up with. You know just what Iâ€™m talking about, donâ€™t you?Resin Adirondack chairs closely mimic the appearance of wood Adirondack chairs, which is just one more reason customers love them so much. And, plastic Adirondack chairs offer more variety, style choices and color palettes than wood patio furniture.

When shopping for plastic resin Adirondack chairs, you get to choose from a wide swatch of colors, including bold hues and pastel stains. Many manufacturers sell two-toned Adirondack chairs, too. These colors will last without fading for years and years, thanks to UV inhibitors built into the finish. Some people choose to repaint their resin chairs after many seasons, just to give them a fresh facade. If you grow tired of the hue, you can do the same, just be sure to use a high-quality exterior paint. Dress up colorful outdoor Adirondack chairs a bit with chair cushions or decorative pillows. By adding a little flair, itâ€™s easy to create a magazine-worthy and comfortable patio furniture scene in your very own back yard.
