Article published on May 26th 2012 | Business

If you have designs with you, which you want to develop as Joomla templates for using it on Joomla websites then PSD to Joomla template conversion i snow available. There are a wide variety of firms in the market today which provide for these services offering world class and highly cost effective services and solutions for Joomla. As compared to the earlier tedious and rigorous process in use earlier, it can now be done at affordable rates and in no time. What is to be done is simply submit your PSD designs which will then be developed into fully functional Joomla templates, and will be provided with a proposed positions map module of yours.

What these PSD to Joomla Template Services provide you as features will include a one hundred percent table less XHTML templates, your templates will be fully hand coded as well. Also you should look for the fact that it is w3c valid code and well commented, good service providers will usually provide you with that kind of code. Also it will be easy to work if it comes with module positions that are completely flexible and collapsible. A good PSD to joomla service template will be search engine friendly and will coding will be laid out as per the latest standards on the web. Now you would also want your code to be compatible on most browsers like versions 7, 8, 9 of Internet Explorer or Mozilla Firefox, Google chrome or Appleâ€™s Safari. Another added feature could be a fast loading but light weight layout structure.

The process to be followed for a PSD to Joomla template service is very simple. All you have to do is give the screenshots of your design to the developers of such service providers, who will go through the code, check and verify it and then send their quote along with the time required for the turnaround. Now given your requirements, some service providers may give free proposals showing the best possible solutions and also suggesting the most favorable module positions map. Once you reach an agreement with them over pricing and other things, all you have to do is give the source PSD files to them and they will begin their work on PSD to JOOmla template service.

The costs are usually dependent on designs and are not usually fixed. So itâ€™s time now , if you have PSD code with you and you want it to be converted to Joomla then look for a service with no hidden costs but having a fast turnaround time in the range of 48 hours. If the company fails to deliver, you should ensure that you get your entire money refunded as that the policy. We can also Say that getting your site done on content management system like joomla is very useful for everyone. Its best to get your PSD developed first with your concept and later get your site coded with joomla which is good for designing as well as very much SEO optimized. Choose today for a PSD to Joomla Template service, that doesnâ€™t just give you a template zip but a fully configured website similar to your PSD design.
