Article published on June 11th 2012 | Business

Most of us are concerned about the beauty of our houses both externally and internally. And for this purpose, many of you use cladding in order to protect our walls. But do all types of cladding materials provide you the same level of satisfaction. The materials may be in the form of wood, stones and plastics. But plastic building supplies are most preferred above wood and stones.

What exactly is PVC Cladding: PVC is a short form for Poly Vinyl Chloride and it is a plastic material that is commonly used in commercial and domestic buildings nowadays. It provides you with benefits of both plastic and wood. These are available in different shapes and colors and you can choose anyone that goes with your walls. PVC panels have become a crucial material for the purpose of interior designing. Stones being expensive and wood that rots early, so due to these factors, PVC panels are also used in bathrooms.

One of the most widely used forms of PVC is PVC sheets. These are available in different thickness because of their processing under high temperature and pressure. Earlier these sheets were prone to fire but with the advancement of technology, now we have PVC sheets that are resistant to fire. Thus, its increases usage inside the house is now a reality.

How PVC is beneficial: Usage of PVC in now not limited to external walls but also extends to interior designs. Hereâ€™s a quick glance at the advantages of PVC:

- PVC is a safe material to use when compared to other materials. Because of this feature, it is widely used in the construction of buildings whether commercial or domestic. Apart from this it is used in the manufacturing of toys, medicine bags, blood bags and so forth

- UPVC Cladding is durable in nature. The external climatic conditions donâ€™t affect its color and style. Apart from this, it is water resistant so if used on bathroom walls it will not get damaged

- PVC Cladding prevents the walls from mould. You can never see mould formation on your walls

- UPVC cladding is very cost effective as these are cheaper than any other material. Along with this it has a very minute maintenance cost as it doesnâ€™t require regular check and can be easily cleaned with water and soap.

No doubt that wood and stone provide their own mixture of beauty but they being expensive, plastic panels are preferred in the present market.
