Roger Hamilton and the Reasons That Made Him a Success by Corwin Smith

Article published on January 10th 2012 | Business

Roger Hamilton is the only name that comes to mind whenever the topic of wealth creation comes up. And there is a very solid reason for that. He is one man who has done so much for the people involved in the field of wealth creation directly or indirectly that his name in the opinion of many would be revered as long as the process of creation of wealth is alive or that thing called world economy is kept alive. But what exactly has this man done to the world of finance that almost every other soul involved in the art and craft of wealth creation is worshipping him. Well! What he has done is that he found the path to riches for the people who want to make it big in life. And he has done it with so much of clarity and vision that people just could not ignore the words that he was saying and writing.

The basic premise on which all of his theories are built upon is that without inculcating the basic tenets of nature in the art of wealth creation it is really impossible for the man to make the most out of his efforts to earn wealth. And Roger Hamilton did not just stop there. In order to show the people how exactly the nature can be inculcated in the art of wealth creation he prepared several set of theories like the wealth dynamics, wealth spectrum as well as many more. And one of the most important things about the man is that he has devised one of the most beautiful of personality tests called the wdprofile test.

Once an individual has completed this test he would become familiar with the personality type that he is. And on the basis of that personality type he would be able to choose the profession that would suit that personality type. And only that profession would lead him to success and other things related to it. In other words it can be said that Roger James Hamilton has opened the gates of wealth and riches for the people who are prepared to listen to the revolutionary theories of his that go contrary to the popular beliefs of the conventional theories of wealth creation.

One of the most important theories on wealth creation that Roger Hamilton has written is that of wealth dynamics. It is this theory that has really uplifted the art of wealth creation from an arduous task to a task that comes naturally to the individual seeking it.
