Safety glasses by Jaguartools

Article published on December 9th 2011 | Business

Safety glasses and sunglasses for your eyes should be worn whenever there is the possibility of eye injury. If you know that you will be probably exposed to eyes hazards, it is the best time before and not after to take positive action with goggles proactive glasses. Law enforcement police, military, special operations team, security, and other enforcement officials need to protect their eyes in a way according to different situations they may incur in the performance of their duties.

Many different hazards are associated with eye injury. Just to name a few flying objects, broken glass, dust or metal. Protection against the instruments or tools used in the field must be brought in the form of safety glasses. Particles present a threat and can cause eye damage. The chemicals can cause varying degrees of eye injury. Of course, biological or radiation hazards lead to eye injuries. The best way to prevent eye injuries is to avoid these dangers by wearing safety glasses available for the worst possible irritating or harmful exposure.

Wearing appropriate eye protection glasses or sunglasses can be decided by the possible danger. Protection against flying objects must be guaranteed by wearing eye glasses that have side shields or wrap around protection. If you work with chemicals, you should wear eye goggles shaped sunglasses that keep irritating substances completely away from the eyes area. If there is possibility of hazardous radiation exposure you must use special glasses to protect your eyes, face shield and even a helmet designed with a mask or full face respirator.

Be aware of your surroundings can help prevent eye injuries. Identify potential risks that could be associated with the tasks execution. Be sure that your vision was checked daily and corrective lenses are required to update your contribution up to the situation you enter. Make sure your eye injury protection goggles fit correctly and comfortably. Above all, make sure that safety glasses meet the requirements of the danger you face. Be responsible for your own eyeglasses eyewear equipment and maintain its integrity for optimal performance.

Most safety impact-resistant glasses are made from polycarbonate. The standard of protection for glasses goggles is ANSI Z-87. Make sure your eye protection goggles is in accordance with this strict standard for safety and performance required by OSHA. Most polycarbonate lenses on the eye glasses are lightweight, to some extent are anti-fog resistant, shock resistant (more than glass or plastic) and are more durable and scratch resistant.

Be aware that eye injuries are occurring every day. More than 2000 cases daily reported eye injuries, over 90% judged to be preventable where the degree of eye injury would decline if appropriate safety glasses were used. The best way to prevent eye injuries is to always evaluate, obtain, enhance and be proactive. Whatever your task is, duty or assignment, always protect your eyes with safety glasses.
