Spray on Concrete for a Brand New and Decorative Surface by [Michael P. Lewis](#)

Article published on April 6th 2012 | [Business](#)

Everyone wants a decorative and brand new surface as it catches the attention and wins appreciations. The concrete surface is highly preferred by the people for its strength and longer life. This surface also gets damaged with passage of time. Water, UV rays, various physical factors and other means can cause damage to the surface by altering its texture and shine. The problem can be encountered anywhere, in the room, patio, courtyard, car parks and various other places. The damaged surface loses its color and gets faded shade.

The solution of the faded surface

The process of spray on concrete can be applied for discovering a brand new and unique surface. In this process, cement coating is applied that is specifically formulated and designed to be used on the concrete surface for getting a brand new look. The concrete surface can be old as well as new. The surface can be provided a unique decorative finish using the process of concrete spray. The spray gets tightly bound to the old concrete surface resulting in the formation of a decorative, slip resistant and strong surface. It can be applied on any area to provide strength and decorative texture to the surface.

Even the old surface can be transformed into a brand new and highly appreciating surface. Suppose, you own a house or restaurant and some guests arrive at your place to visit you. Your concrete surface has faded with time and has got very dull appearance. The reactions of guests can make you highly embarrassed. The solution to this problem is to spray the concrete. It is not necessary to rebuild the surface again for getting a decorative floor.

By simply spraying a coating of the cement on the existing concrete surface can provide you better results. The process is also applied to get a surface that has crafted art designed by you. The color, pattern and design all can be of your choice. You can decorate your place in your own way as per your wish by using this technique. This technique also meets your budgetary requirements as it is highly cost effective. This technique turns a dull slab of concrete into a very attractive and beautifully crafted paving area. Any floor can be transformed to give any desired color for enhancing the beauty of the place.

The coatings done by spray is cement based that assures the strength of the surface. Hence, the worries of chipping off and wear and tear are not a matter of concern. The UV protected spray has also been developed to provide a more durable surface that lasts long. The look of the surface can be changed anytime with the desired color and design without worrying about the cost. It is a cost effective method to decorate any place that even includes floor, verandah, pathway and car parks.
