The surveillance camera manufacturers to teach you a new understanding: the low-light camera applications

The use of low-light camera is now more widely, more and more advanced technology with the role of many c

Low-light MiNi IP Camera for road monitoring focused on a highway toll monitoring system, the main lanes of the toll station, toll plaza, toll booths of the charges, the type of vehicles through the toll lane, the operation of the toll and fare collection process in emergencies and special events were observed and recorded, and the implementation of effective supervision. Especially in the evening, the staff of the toll station to see the license plate, under normal circumstances, open the lights, the ambient illumination of the road and license plate illumination formed a certain amount of dynamic range, traditional camera is difficult to "see" great demand for low-light WiFi IP Camera

Followed by the electronic police system, CCTV surveillance and red-light automatic video recording and other means to improve the intuitive command center, real-time mobilization capacity and ability to respond to traffic accidents, accidents, and enhance the objectivity to investigate and deal with illegal and comprehensive, coordinated control, control areas to improve the capacity of the vehicle. Need to see the license plate, the 24-hour monitoring, With demand so low-light cameras.

In addition to some of the more traditional areas of monitoring, but also in some cases in low-light environments may be inconvenient plus the place of the light source, such as in the hospital ward, you want a doctor or nurse on duty for performance appraisal. If light ward Riga, will affect the patient is at rest, so you need a low light camera. There are also some place inappropriate external light source, such as prisons and other special units in the hidden location of mounting the Surveillance Camera.

At the moment, the application of low-lightWireless IP Camera is not limited to CCTV surveillance occasions, including some of the equipment manufacturing industry, bio-medical and scientific research and military fields have a wide range of applications, such as Samsung photoelectron ultimate ultra-low-light camera, the illumination values can reach the 0.000008Lux The product is mainly used for medical cause, we need high-definition areas. In addition, some areas In addition to the concern of the characteristics of the product index, the form factor of the product to the degree of trifles. The development of low-light Android IP Camera, do not only concern the current monitoring needs in the area, but should listen to the needs of other industries to solve low-light conditions to obtain low-noise images, the other the corresponding range of the spectrum can be done more broadly in order to adapt to multi- needs in the area.
