Article published on April 19th 2012 | Business

For a home to be functional and efficient, it needs to have the necessary protective coating to withstand any form of destruction. Architects, engineers and general safety authorities use plastic sheets as protective coating for windows and many other glass surfaces.

Plastic sheeting is usually made of diverse materials such as polystyrene, polyethylene, and acrylic. The application of sheet can range from simple glass framing to complex construction. You have a choice between transparent plastic sheeting or blue.

Moreover, people who reside in high rise buildings and establishments have come to learn the benefits of having their windows sheeted with plastic. Homeowners who want to remodel their homes may find plastic sheets as a great benefit to them. Architects and engineers also find plastic sheet as a great way to provide adequate shading in construction sites and protection to glass surfaces from many harmful elements such as the sun and debris. Here are some of the benefits of having a plastic sheet coating on the surface of glass.

Protection

The ultimate purpose of glass film coating is to provide protection from the harmful ultraviolet (UV) rays of the sun. Severe exposure to UV rays can deteriorate glass and many other surfaces over time. A plastic sheet will serve as a device to keep UV rays from entering your home, affecting carpets and other valuable furniture. Furthermore, itâ€™s also an ideal item for the protection of your valuables from stains caused by paint when youâ€™re remodeling your household.

Efficiency

Drapes and curtains arenâ€™t the only ones that serve as protection from warm and cold weathers though; a glass film will also serve as an insulator around the household. When well-insulated, your house can conserve energy efficiently, which helps you save up on bills.

Durable and Flexible

Glass film coating is strong enough to protect your roof, floors, doors, walls, and many other valuables from dents and scratches. Itâ€™s extremely flexible; it can cover just about any shape and size. In most cases, plastic sheets can last for years and cost you less than $30 to replace them.

User-Friendly

You neednâ€™t be a pro to install glass film onto your glass surfaces. The product is made efficiently, so anyone can install them. The sheet is self-adhesive for convenient installation. It is best installed during warm weather. If it is inevitable cold on the day you install, the sheet should be warmed to at least 60 degrees Fahrenheit.
