Article published on April 16th 2012 | Business

Led bulbs are very useful these days as they help in saving a lot of energy while offering sufficient light. However these down light bulbs do contain mercury. This may well be a risky factor as disposing the bulbs will surely cause environmental threat. However, this particular factor does not decrease the popularity of these bulbs and light chains.

Led lights last longer compared to those incandescent bulbs. In fact, they last fifteen times more than those traditional bulbs. LEDs of economical category are obviously a bit expensive because those ones offer for minimal energy consumption. These LED lights also help in reducing the carbon emission. As a result, our planet gets saved from pollution. Using LED bulb helps in making our planet remain greener and healthier.

If you travel to Ireland, then not a single incandescent light can be seen. Only LED lights are used. In fact, different other parts of Europe are also trying to follow the same procedure to save our planet from getting polluted. This also helps in saving a lot of energy. Some of the cheapest LED bulbs that can be seen being commonly used are MR16, PAR20 and GU10.

LED bulb light chains are very popular these days. They are used for decoration purpose in happy occasions like birthday, marriage reception, thanksgiving, Christmas, New Year, Diwali, etc. In fact, these lights look wonderful while glowing in its full form. Different colored bulbs are available in this category. Some of the most common colors are blue, green, and yellow. However, red and pink colored bulbs are also available these days. Some light chains feature for assorted colored bulbs. They also feature for a light movement controlling transformer. This helps in controlling the light glowing motion and frequency of blinking.
