The Soothing Effect of Heated Floor Tiles by [Julia Roger](#)

Article published on July 24th 2012 | [Business](#)

A warm and cozy environment gives you ultimate relaxation and comfort during winters. Most of us do not like the idea of even walking barefoot on cold floor tiles, which gives us shivers. Whether it is a bathroom or any other room of our house, we always want the place to feel soothing warm as during summers. Heated Floor Tiles prove to be a good choice in such chilling winters as they offer a healthy and comfortable radiant heat in your home. Ideal for new construction and renovation projects these heating systems would always make you feel stay at home. Strong, durable and lightweight they can be installed easily under any type of floor be it tiled, stone, granite, laminated or wooden.

Energy efficient and covered with a warranty these heated tiles would not raise your floor heights as they are installed under your tiles properly allowing them to adjust within the provided space. The heating of the tiles can be controlled using a programmable thermostat and can even be switched off when not required during the warmer months. These Heating Under Floor systems radiate the heat using infrared radiation. They are much more efficient than other forms of heating and prove to be beneficial for people with severe allergies. Different types of under floor heating systems are used depending on the room sizes and heating requirements. The designers make the analysis of the appropriate heating system type and heating experts suggest you a suitable system based on your needs and budget. These professionals are highly experienced in their task and provide a free layout and electrical worksheet to ensure that the project is complete in accordance with the client's expectations.

The radiant heating systems are made using premium quality materials and have been duly tested and certified for safety standards. You even do not need to worry about your child or pet getting too close to the system as they are installed underneath the floor. These systems can be installed anywhere without the need to remove the existing floor cover. Energy efficient they uniformly heat up the floor and are self-regulating as well. Covered with a warranty they can be replaced in case of any damage and offer a soundless comfort.
