Traffic cones are an essential part of road safety

Traffic cones are also referred to as traffic pylons, road cones, highway cones, safety cones or construction cones. They are usually cone-shaped markers that are placed on roads or footpaths and are commonly used to temporarily redirect traffic in a safe manner. Traffic cones are often used to create separation or merge lanes during road construction projects or automobile accidents. Traffic cones are ideal as they are easy to move and remove and are an ideal temporary traffic solution. Traffic cones, invented in 1914 by Charles P. Rudebaker were originally made of concrete. Today they are more commonly brightly-coloured thermoplastic or rubber cones and are most often a fluorescent â€œsafetyâ€• orange. Traffic cones today are also made from recycled materials such as PVC from bottles so are also eco-friendly.

Traffic cones are used for a variety of reasons

Traffic cones commonly come with reflective striping around them designed to increase visibility at night time. Traffic cones are mostly seen in many urban environments and around highway construction or repair projects. Traffic cones are used to divert traffic or merge lanes as road works are in progress. Typically, traffic cones are used outdoors during road work or other situations requiring traffic redirection or serve as an advance warning of hazards or dangers, or the prevention of traffic. Traffic cones are also an ideal solution to mark where children are playing or to block off an area needed for construction or repair usage. For night time use or low-light situations traffic cones are usually fitted with a retro-reflective sleeve to increase visibility.

Where to find a variety of traffic cones and other road safety equipment

As traffic cones are an essential part of road safety, you can go online today to www.manchestersafety.co.uk and there you will find a wide variety of traffic cones and other forms of road safety equipment to suit your traffic safety needs. Visit them online today for more information.
