Use Containers to Build Better and Beautiful Home by Robert Gulgeria

Article published on April 11th 2012 | Business

Nowadays people are looking for trendy and innovative ideas in almost every field. Everyone loves to buy things that are trendy and latest in the market. They have stopped buying cheap products and started buying trendy items. This phenomenon is seen from selecting clothes to constructing houses. Everyone like to build a house which looks different cheap and convenient. Like in every other field trends keep coming and going but building homes with shipping container is still on people favorite list. Container homes are cheap and durable comparing to traditional homes. There are many other features also which is making them more adorable.

What Is A Container Home?

Container homes are entirely different from traditional homes. They are made by aligning shipping containers in different styles. They are really cheaper than of traditional buildings like timber framed, brick buildings and mortar buildings. Anyone can build a container home if they like the construction time will taken in building them will very less than other buildings. Another advantage of container homes is that they are eco friendly. If you want to built go green you will not get a better option. Shipping containers can be used as a modular cabin as well.

What Makes Shipping Container Homes Economical?

Shipping containers are readily available. Although the rates of containers are now on the rise you can get them in a reasonable amount if you bargain. An average shipping container will cost from $1500 to $3000. It is very cheap comparing to the rising prices of rising prices of conventional building materials. We can hope that the rate of shipping containers will decrease soon as the global recession starting to ebb.

Choosing Shipping Container As A Building Material

There are many other reasons to shipping container as building material besides it lower rate. Shipping containers are very durable compared to other materials they are made up of quality steel and designed to withstand all types of weather and pressure. They are designed to work for almost 20 years in the ocean weather conditions before decommission. If they are placed stationary and maintained carefully they can be used for a lifetime. They are made prefabricated steel so they are strong and rigid so it will be more suitable for the places with high rate of geological activities like hurricane and earthquakes. They can with stand wind up to 281 km/hr. You have to insulate the containers with green/living roof before using it so that it will be cold in summer season and heat in winter season. You must also remember to remove the floors of the container because it contains some harmful chemicals. It can be also used as a modular cabin. If you want a separate store room in your back yard or to build variety office room, containers can be a good option.

Know More About Container Homes

You can know more about container homes by studying internet or by reading different magazines. Both will give plenty of details and information you can see different pictures of container homes and select them.
