Utility and maintainance of printers. by Robert King

Article published on January 24th 2012 | Business

Printer is an integral computer peripheral that receives text and graphic output from a computer and transfers the information to a paper.Many a times, printers are bought separately but often they come along when you buy a computer. Printers come in different sizes/features and the value of the printer depends on these factors. As a rule, the higher the colour resolution printing it offers, the more costly it becomes.

There are different kinds and brands of printer one can see in marketplace, laser printer, line printer, inkjet, thermal printer, and LCD & LED to name a few. Before buying a printer, one must consider the main factor that affects the decision making such as the use of printer. Whether youâ€™re buying for home use or office use? Inkjet printers are regarded to be excellent option, if you looking for home use purpose. Inkjet printer offer good quality print, it is not difficultto use, at the same time, and they are very cheap. Inkjet printers are good in result oriented graphics prints.

While zeroing on a printer, one must consider a number of different factors, like where and how often it is going to be used. If a printer is being purchased for office use, then you might want to select a printer that has the capability to handle a large volume of pages that could potentially need to be printed every day. If you rarely need to print paper, you may go for a cheap printer like inkjet type printer. You will also have to bring into account out your needs as to what all features you expect in your printer or if you would like your printer to be a standalone unit. If you have a fixed amount of space available, you might want to consider a printer that is integrated with a scanner or other features while selecting a printer.

An important part of ink jet printer is called as ink cartridge. Ink cartridge is a detachable part that holds the ink which is stored onto paper throughout printing.

If your need is to print colour images on a routine basis, then it is suggested to go for an inkjet printer. Inkjet printers are also viewed to be a best choice if you are into creating photographs on glossy paper stock. In terms of cost, colour laser printers are comparatively more expensive than inkjets printers.

Ink cartridges can also be refilled instead of getting replaced with a new one, by doing this, consumers prolong the life of their ink cartridges and saves some money at the same time. To refill a cartridge, users have to buy ink as well as other refilling products. It's also feasible to refill the same cartridges several times, but a lot of printer owners discover the process of refilling cartridges cumbersome and unwieldy. If your printer is running out of ink, you can reinstall a cartridge, shake it well and put it back into the printer. This process can help increase the life of your cartridge and postpone the need to replace your cartridge in the printer.

To maintain is compulsory for your printer, if you do proper care of your printer. The life of printer will extend and it will work efficiently. Always shutdown your printer if you are not utilising it. Always remember not to use dirty or dusty papers for printing. Try not to have direct contact with the electrical parts of the cartridges such as chips. When you fill the cartridges, try not to fill completely, it may drive leaks in cartridges and can split on the motherboard of the printer. Do not use your printer without cartridge for a long time, this could be a reason for the print head to dry.
