Watch and Share DVD Movies on Handheld Devices by Wang Alice

Article published on February 20th 2012 | Business

There are a number of movie that were released on January, 2012. Some of them were long anticipated movies. Movies like Contagion, The Guard, The Last Lions, Puncture, Money ball, Higher Ground, 1911, Penguins of Madagascar: Operation Blowhole, The Ides of March, 50/50, Real Steel, The Mill and the Cross etc. were being awaited for some time and they are at last released on DVDs. Many of us may buy them and still not be able to watch them. The reason is the increasing busyness of our day. Life is getting busier by day and it is hard to find some time for you. So what do you do if you want to watch those movies?

There is a simple solution. We actually waste a lot of time when we travel. Say you are going somewhere by bus. All the time in the bus you got nothing to do. You can watch the movie then. Again, there are times when you are waiting for someone in a coffee shop or you are waiting for the bus or train to arrive or you are waiting in queue for something. At those times, you can just start watching the movie. The problem is how you are going to watch a DVD at those times?

DVDs require a DVD player and a TV that you cannot just conjure up anywhere. So what you have to do is to import those DVD into your handheld devices. If you got the movies in your handheld devices, you can just launch it and put your ear phones on whenever you have spare time. Thing is you cannot just import DVDs into handheld devices.

DVDs use VOB format. VOB is a video format. It is the abbreviation for Video Objects. This format is used everywhere for DVD videos. But this format is unsupported by the handheld devices. If you just copy and import the VOB files into your handhelds, it wonâ€™t play. If you convert the video format into a suitable format, there will still be problems. The movies inside a DVD are segmented into pieces. If you convert them individually, the movie will still be segmented and you may miss subtitles and other information from the DVD. So, you have to use a DVD Ripper Mac.

DVD rippers rip a movie off a DVD and convert it into other format. If instructed you can rip it as a whole. If you want to rip it by title or if you want to rip only a part of it, you can do so as well. You have to be careful though, because there are low quality DVD rippers that can degrade the video quality while ripping the DVD. You should use the DVD Ripper for Mac by iSkysoft. It is a reputed user friendly tool with an array of options available. It retains the original quality of the DVD movie and it provides superb services.

With a DVD ripper you can also create backups of your DVD movies so that you can watch them without the DVD. You can edit them for personal use and of course, you can watch those movies on you handheld devices.
