Article published on January 16th 2012 | Business

If someone is planning to become a plumber he must have been going through with lots of questions, such as where to begin this work and what are the requirements to become a plumber. Basically a plumber is also a professional like so many other professions, this work involves installing, fixing or repairing supplies of bathrooms or toilets, and it also includes gas systems installation and repairing and other related words such as sewerage and drains.

To become a good plumber requires a proper educational and teaching background of related field. It gives a plumber the required skills that are needed to perform his duties. There are a few certified courses to becoming a professional and certified plumber; there are quite of few institutions, such as, community colleges, trade and technical schools and other skill development institutes to obtain certified plumbing course. There are other higher certificate programs as well; these are usually referred as associate's degree in heating and plumbing technology. Accruing such certificates a person can look to have a better job in any

renowned construction and engineering firms or he can even start his own business of plumbing.

Following are basic duties of a plumber: -

All distribution of fresh/clean and wastewater in any domestic, commercial or industrial setup is the responsibility of the plumber who is looking after the work or has signed any contract for it. Installing, maintaining and repairing of fixtures, pipes and other plumbing supplies are also comes under the duty of a plumber.

A plumber must know how to set up the entire plumbing system of a building or a industry by reading blueprints, AutoCAD drawings and other specifications given by the civil engineers to determine the water supply network and waste and drainage systems of the unreconstructed place. Section of precut pieces of copper tubing and other fittings and their insertion in the holes according to the map is also an important and time-consuming duty of a plumber. A plumber has to be closely connected with the engineers of the constructing building to ensure that all his work is going according to the map and plans of the engineer. This will also avoid any botheration or delay that usually happens when efforts are not organized or coordinated.

To ensure that the whole work is going in accordance with the specification provided by other agents such as traders and laborers is an other important dusty of a plumber. Following rules and regulation provided by the government authorities in the form of legislation and policies also comes under the duties of a plumber.

Other that these technical duties a plumber has to perform other task as well that may not appear as his work, but they are closely linked to what he do. These tasks include, providing customer services not only by himself, but also customer should be dealt with respect by his hired staff, such as labors or helpers. A plumber is also an adviser, who gives his customers the best possible solution for their problem. Thus, any work that is done with courtesy and dedication, always appreciated by people, a plumber also have so many important task to perform of daily basis.
