What is a Platform Trolley?

by Mogenn Fenixx

Article published on July 4th 2012 | Business

Platform Trolleys and Multi tier trolleys find a useful place in business storage places, in industries and to transport goods from one place to another in the establishment. Business storage facilities in warehouses vary greatly in size, style and location. Some places require multilevel warehouses, where you have to transport your equipment, and goods using trolleys like the platform and the multi tier trolley through lifts and stairs. Stacking your goods is very important and trolleys help in racking the items systematically for you.

All trolleys need to be sturdy, reliable and easily manoeuvrable. The platform and the multi tier trolleys have a classic design with balance wheels. The trolley can be easily manoeuvred with ease in a small space and is easily rota-table making is very useful and easy to transport goods in smaller areas. Most trolleys are built with a MDF platform so that it is strong and rugged to carry heavy goods, and are well equipped with solid tyres, a very hardy and sturdy steel frame for durability with an optional mesh to keep the goods safe and a push handle that is movable to make the trolley easy and practical to use.

Warehouse trolleys or platform trolleys are the ones to transport machines in warehouses. They are very useful in areas in the ware house where heavy equipment needs to be distributed, in relocating loads in an efficient, fast and easy manner. Besides platform trolleys, you can have multi tiered trolleys, stainless steel trolleys, and gem hand trolleys. Platform trolleys are for lifting heavy loads, have four castors and a handle. They are designed in a simple way to make it possible for the workers to push or pull heavy objects with relative ease using less force. The castors help to easily manage the direction of the trolleys. These trolleys are with made with solid rubber, air filled pneumatic types or cast iron variety. The main frame is made of solid steel and the bottom is usually made of mesh or steel or a wooden board.

The platform trolley and the multi tier trolley needs maintenance, they should not be left outdoors, or else exposure to humidity and heat can leave it to rust. The appropriate amount of load needs to be checked, putting extra weight than what it can hold will damage the trolley and it could even collapse during transport. The Platform trolley and the multi tier trolley are useful in heavy duty application, and these help in movement of heavy loads with a specific design to carry and move objects and most of them are fabricated with the best high grade quality material to ensure they last long and need practically no repair or maintenance.
