What is the Best Microsoft Office Certification?

by DJ Willis

Article published on December 21st 2011 | Business

Did you realize you have access to Microsoft certifications for most of the Microsoft technologies at all abilities. Microsoft awards these professional certifications to individuals that pass one or more exams in a variety of areas. There are exams to cover system administration, web development, networking, database management and many more advanced technologies. The tests contain 40 to 90 multiple choice questions, and students have two to three hours to complete.

The certifications focus mainly on the product as opposed to aptitude tests you might take for a trainee job. The MC prefix stands for Microsoft Certified, and it is accustomed to specify the various certifications. For instance, MCITP indicates a Microsoft Certified IT Professional, MCPD stands for Microsoft Certified Professional Developer and MCTS means Microsoft Certified Technology Specialist.

Many professionals want to know the very best Microsoft certifications to visit after. Typically the most popular the first is the MCSE or Microsoft Certified Systems Engineer. To earn the MCSE certification on Windows Server 2003 you must pass an overall total of seven exams. There are four core exams which cover networking systems, one on client os's, a core design exam and one elective.

Technology-specific companies list the MCSE as a desired title for his or her job hunters. It's regarded as the most grueling title from the series of available datacenter-focused titles, and you ought to have a couple of years of administration experience before attempting these exams. To organize, courses could be taken in a certified training location or by using the self-study Site and appropriate training materials.

Microsoft certifications include the Microsoft Certified Professional or MCP, which is the second most widely used certification after the MCSE. It is really an basic level certification for help-desk technicians along with other low level techs. However, it can quickly lead to promotions and salary increases. It is also used as a stepping-stone for more advanced credentials.

The MCP requires just one test, so it's thought to be the easiest credential to earn. That does not mean the exam is really a easy. Lots of knowledge is tested, which is tough to pass without experience of a service-desk or perhaps a network environment. It is a test with an operating system like Windows Vista or Windows XP.

Having a number of Microsoft certifications provides you with an advantage within the employment market over candidates who are not certified. In a tough economy IT jobs could be few and far between, so any edge you have over others can help you land a good job. You'll be able to keep your skills competitive and relevant with each certification you get.

Certification from Microsoft is viewed as an industry standard. It is recognized worldwide and results in many job opportunities. Employers are quickly learning the benefits of hired certified individuals. For instance, downtime is reduced by 20 %, and teams which are certified are 28 percent more productive according to recent reports.
