What Makes Wine Cellar Doors Different from Other Doors? by Saima Triphor

Article published on December 23rd 2011 | Business

After investing a good amount on building wine cellar for rare collection of wines, it would be injustice to have unfurnished entrance. Wine cellar doors must be impressive to dent a positive impression on a visitor to the room. Moreover, it should be designed to create right moods for celebrations, keeping the taste of wine cellar interiors in mind. Apart from bearing reflection of interiors, such doors must allow maintaining right balance of climatic conditions, such as temperature, moisture and light balance. Moreover, it should aid in maintaining the overall ambience of the room. In fact, right conditions are important for maturing wines properly and doors play an important role in accomplishing this.

The cellar entrance needs to have a strong door, which could disallow leaking of external air into the air-conditioned room. For this, it needs to be sturdy and appropriately thick. Moreover, the wine cellar doors need good insulation to avert warping. It is convenient to have an automatic door to facilitate better movement. In addition, the automatic doors help in monitoring door keeping. Moreover, the time gap between the opening and closing of door needs optimization. In addition, doors need to establish good contact with the frame to entrap cool air inside them. It is ideal to have good sealing, failing which one may fall into jeopardy of paying hefty electricity bills.

To find best material for making wine cellar doors, one may make use of the latest technology such as LVL or Laminated Veneer Lumber. A LVL is a kind of engineered wood manufactured using wood of smaller diameters. In these woods, thin wood layers bond one over another with the help of appropriate wood adhesives. In fact, the use of LVL is better than traditional technologies, as it promises better mechanical properties such as higher durability, improved chemical resistant, reduced warping, lower percentage of shrink and uniformity in texture. Above-mentioned properties hold key to good performance of a cellar door as it aids the process of preserving wine along with their natural color, aroma and flavor. No doubt, why then wine cellar doors are different from various other types of doors available.
