Article published on July 30th 2012 | Business

MHT Lighting is the company which is known for its Energy efficient products which are widely used in the government, municipalities, State agencies and small to large corporations throughout the US and overseas. Some applications for the Induction and LED lighting include gas stations, parking garages, parking lots, walkways, parks, tunnels, retail, schools, offices, gymnasiums, and warehouses. There are also the energy savings devices like MHTâ€™s SP1000 that is used for inductive loads. For example anyone who has HVAC, refrigeration, elevators, water pumps is a perfect candidate for the SP1000.

One of such energy saving devices to look for is the SP1000. When you have this device, you will be assured of energy savings because it has the efficiency rating of 95%. The product comes with a dashboard which allows the users to check the savings in real time so they are able to know if they are saving or not. You can use it to report and to monitor the energy that you save and the minimum electric bills that you can save on monthly basis. It is able to store data for over 3 years.

Other benefits that you will find in the SP1000 are: the fast return on investment, becoming profitable with 12 to 18 months. It can reduce the demand charge up to 60 percent. This device can limit the harmonic distortion and it has been custom designed to ensure the savings. Another energy saving product to look for is the induction lighting. You will find that many people will use the light induction in warehouses and all perimeters lighting because it is 20 year maintenance free light, which is in most cases more important than the 50 to 70% energy savings.

If you are a distributor that would like to distribute the MHT products or if you want to buy them for your company, you will be assured of benefiting from the reduced demands charges and the increased environmental benefits. This will mean that the company is able to reduce the carbon footprint as well as the helping the overall environment. As the company, you can also benefit in the simplifying inefficiency and failure diagnostic. The SP1000 has been built to help in identifying the non-standard usage for the electricity in the automatic way. In this way, it simplifies the diagnostic problem. Besides energy efficiency, the device also comes with the SPIDER program which displays 12 different measurements that can be used to make corrective actions. The best part about this system is that you can access it any where since you are able to access it on computer to retrieve the data. This ensures that you are reducing the maintenance cost.
